## ECOSTEP ${ }^{\circledR} 100$

Safety Instructions

Technical Specification
Installation

Buchaer Straße 1-D-07745 Jena

## Safety Instructions

## General

All transportation, storage, assembly, installation, connection, comissioning and service work must only be carried out by qualified skilled personnel taking the following into account: the relevant documentation, regulations and requirements pertaining to the equipment concerned as well as national and regional safety and accident prevention regulations.

Qualified skilled personnel are persons who have a relevant vocational qualification and have proper knowledge of the execution of the above-mentioned work.

Read the documentation carefully before installation and comissioning. Serious injury to persons and equipment may result through improper use of the device or incorrect installation or operation. All technical specifications and conditions must be adhered to in all cases.

- The device contains electrostatic sensitive components, which may be damaged by improper handling. Discharge yourself before you touch the device. Avoid contact to high isolating materials (e.g. synthetic fibres, plastic films, etc.).

Control and power connectors may be energized even when the motor does not move. All electrical connectors of the device must not be neither plugged in nor disconnected under voltage since electric arcs may demage persons and connectors.

Do not touch components which are energized during operation immediately after disconnection from supply. Wait after disconnection of the device from the power supply at least 6 minutes before you touch components which are energized during operation. The DC-Bus capacitor remains charged to dangerous voltages up to 6 minutes after power-off. This time could be higher depending on the external power supply. For your safety, measure the DC-Bus voltage and wait until it is lower than 40 V .

## Proper Use

The device ECOSTEP is intended for use in commercial equipment and comply with the applicable standards and regulations and meets the requirements of the Low Voltage Directive 73/23/EEC. All technical specifications and permissible conditions mentioned in the documentation must be adhered to in all cases. The device ECOSTEP is a component intended for installation in machinery. Comissioning (starting operation in accordance with the intended use) is prohibited until such time as the machine's conformity with EMC Directive 89/336/EEC and Machinery Directive 89/392/EEC has been established (note EN 60204).

The following are prohibited, unless expressly provided otherwise:
use in hazardous areas
use near oils, acids, gases, vapours, dust, radiation, etc.

## Guidelines for Mounting and Installation

Upon mounting and installation, note the following points:

- ensure that the equipment is installed on a suitable, low-vibration substructure or in an electric cabinet,
- allow unhindered ventilation,
- make sure there is sufficient clearance between adjacent units,
- be careful when handling components to avoid injury to persons or equipment (do not touch, bend or damage electronic components and contacts, do not change isolating clearances).

## Electrical Connection

All installation instructions mentioned in the documentation must be considered. All work must be carried out only when

- the electric equipment is disconnected from the power supply and prevented from being switched on accidentally,
- you have double-checked that the equipment is de-energized
- you have ensured that any additional monitoring and protective features are properly installed.

When connecting the equipment to the power supply, ensure that

- the applicable standards and regulations are complied with,
- the power connections are permanently secured,
- the EMC-compliant installation (e.g. screening, earthing, arrangement of filters and laying of cables) is realized.
Note that the machine manufacturer is responsible for the complience of the final machine with all limits of the valid EMC regulations.

## Operation

Do not disable monitoring and protective features during the trial run. Covers, electric cabinet doors etc. must always be closed during operation. In the event of changes in the operating state, switch off the equipment in case of doubt and try to establish the cause. Contact the manufacturer if necessary.

## Further documentation for software commissioning and operation

For software commissioning of the ECOSTEP100, follow the guideline "Software Commissioning ECOVARIO and ECOSTEP" which is provided on the CD-ROM delivered together with the device. Furthermore, you will find documentation on operation and application of the ECOSTEP100 on this CD-ROM.

## Technical Specifications

## Operating Modes

| Online positioning drive by fieldbus | RS232, CAN (Version AA) or <br> RS232, RS485 (Version LA) |
| :--- | :--- |
| Positioning drive by PLC interface | digital PLC I/O |
| Positioning drive by pulse/direction | RS422, 24 V or 5 V signals |
| Speed controller by analog command | 10 Bit analog input |
| Master/Slave positioning drive | RS422 or 24 V encoder signals |

Controller Loop Data

| Sampling time digital speed loop | $0.25 \mathrm{~ms}(4 \mathrm{kHz})$ |
| :--- | :--- |
| Sampling time digital position loop | $1.0 \mathrm{~ms}(1 \mathrm{kHz})$ |

## Power Stage Specifications

| Max. RMS phase current | $5.6 \mathrm{~A}_{\mathrm{rms}}$ |
| :--- | :--- |
| Max. phase current | $8 \mathrm{~A}_{\mathrm{DC}}$ |
| Max. output voltage | $\mathrm{U}_{\mathrm{DC} \text {-BUS }}$ |
| Max. output power | 0.5 kW |
| Short-circuit protection of motor output | motor phases to DC-BUS and amongst |
| Min. inductance of motor winding | 0.5 mH |
| Lentgh of motor cable | max. 10 m (otherwise consult supplier) |
| Frequency of output current ripple | 16.4 kHz |

Electrical Specifications

| Control logic supply | $18 \ldots 30 \mathrm{~V} \mathrm{DC}$, ripple $<10 \%$ |
| :--- | :--- |
| Fuse of control logic supply (recommended) | 3 AT |
| Bus power supply (U $\mathrm{U}_{\mathrm{DC}}$-BUS) | $24 \ldots 70 \mathrm{~V}_{\mathrm{DC}}$ |
| Fuse of bus power supply (recommended) | 10 AT |

## Operating Conditions

| Operating temperature | $0 \ldots 40^{\circ} \mathrm{C}$ |
| :--- | :--- |
| Storage temperature | $-10 \ldots 70^{\circ} \mathrm{C}$ |
| Humidity (non-condensing) | $5 \ldots 95 \%$ (RH-2 according to IEC 61131-2) |
| Pollution degree | 2 (according to IEC 61131-2) |
| Protection class | IP20 |
| Place of installation | dust-free, dry, lockable (e.g. electrical cabinet) |
| Mounting position | vertical (refer to "ECOSTEP Installation") |
| Installation altitude | up to 1000 m above sea level (full ratings) |
| Power loss dissipation: <br> @ 5,6 A <br> rms (UC-BUS$\leq 70 \mathrm{~V}$ ) | $\leq 20 \mathrm{~W}$ |
| Cooling | Installation on mounting plate |

## Mechanical Specifications

| Housing | aluminium, passivated, conforming to RoHS |
| :--- | :--- |
| Dimensions (H x W x D mm) | $200 \times 87 \times 50$ (without mating connectors ) |
| Mass | 0.5 kg |
| Cable mounting and strain relief | metal clips, max. cable diameter 15 mm |
| Connector fieldbus (X1) <br> - Version AA (CAN) <br> - Vrsion LA (RS485) | Sub-D 9-pole plug (male) <br> Sub-D 9-pole socket (female) |
| Connectors for: <br> RS232 (X5), <br> Master Encoder (X7), <br> Encoder In (X8) | Sub-D 9-pole socket (female) |
| l/O connectors (X3, X4) |  |
| Motor connector (X9) | WAGO, series 735 (cage clamp, max. $0.75^{2}$ ) |
| Bus power supply connector (X10) | WAGO, series 235 (cage clamp, max. $1.5^{2}$ ) |

## Communication Interfaces

| CAN (version AA) <br> (Galvanically isolated, ext. supply $8 . .24 \mathrm{~V}$, max. 850 mA ) Important note: <br> If $24 \mathrm{~V}_{\mathrm{DC}}$, use only a stabilized supply! | CANopen according to DS301, DSP402 max. 1 MBaud, max. 15 nodes max. cable length 40m @ 1 MBaud max. cable length 1 km @ 50 kBaud |
| :---: | :---: |
| RS232 | public JAT-protocol (similar to CANopen DS301) 9.6 kBaud, max. 15 nodes max. cable length 10 m |
| $\begin{aligned} & \text { RS485 (2/4-wire) } \\ & \text { (Version LA) } \end{aligned}$ | public JAT-protocol (similar to CANopen DS301) 38.4 kBaud, max. 15 nodes max. cable length 400 m |
|  | protocol JETWAY-R (comp. JETTER AG) max. 38.4 kBaud, max. 14 nodes max. cable length 400 m |

## Motor Encoder Input

| Motor encoder supply | $5 \mathrm{~V} \mathrm{DC}, \mathrm{max} 0.2 A$. |
| :--- | :--- |
| Signal specification | differential TTL line driver (RS422: A, B, N, /A, /B, /N) |
| Input frequency | max. 2 MHz |
| Edge clearance | $\min .0 .1 \mu \mathrm{~s}$ |
| Pulse width | $\min .0 .125 \mu \mathrm{~s}$ |
| Galvanic isolation | none |

## Master Encoder Input

| Master encoder supply | $5 \mathrm{~V}_{\mathrm{DC}}(\max .0 .2 \mathrm{~A})$ or $24 \mathrm{~V}_{\mathrm{DC}}(\max .0 .1 \mathrm{~A})$ |
| :--- | :--- |
| Signal specification | differential TTL line driver $(\mathrm{RS} 422: \mathrm{A}, \mathrm{B}, \mathrm{N}, / \mathrm{A}, / \mathrm{B}, / \mathrm{N})$ |
|  | or |
|  | 24 V signals $(\mathrm{A}, \mathrm{B}, \mathrm{N})$ |
| Input frequency | $\max .2 \mathrm{MHz}$ |
| Edge clearance | min. $0.1 \mu \mathrm{~s}$ |
| Pulse width | min. $0.125 \mu \mathrm{~s}$ |
| Galvanic isolation | none |

## Digital Inputs

| Number of inputs | 10, thereoff 8 programmable |
| :--- | :--- |
| Rated input voltage | $24 \mathrm{~V}_{\mathrm{DC}}$ |
| Input voltage range | $20 \ldots 30 \mathrm{~V}$ |
| Input current | approx. 4 mA |
| Input resistance | $5 \mathrm{k} \Omega$ |
| Input delay | appr. 1 ms |
| Input voltage for state "ON" | $>13 \mathrm{~V}$ |
| Input voltage for state "OFF" | $<4 \mathrm{~V}$ |
| Galvanic isolation | none |

## Digital Outputs

| Number of outputs | 3 , thereoff 2 programmable |
| :--- | :--- |
| Type of outputs | highside-driver to +24 V |
| Rated output voltage | 24 V DC |
| Output voltage range | $20 \ldots 30 \mathrm{~V}$ |
| Output current | max. 0.5 A |
| Holding brake output | 24 V, max. $1.0 / 0.5 \mathrm{~A} \mathrm{(100} \mathrm{~ms} \mathrm{/} \mathrm{continous)}$ |
| Protection circuits | against thermical overload and short-circuit to GND |
| Regeneration energy of inductive loads | max. 0.2 J (internal Z-diodes provide fast <br> demagnetization of inductive loads) |
| Galvanic isolation | none |

## Analog Input

| Input voltage range | $+/-10 \mathrm{~V}$ (differential input) |
| :--- | :--- |
| Input voltage | max. 15 V |
| Input resistance | appr. $100 \mathrm{k} \Omega$ |
| Input delay | appr. 0.1 ms |
| Resolution | 10 Bit |
| Galvanic isolation | none |

CE Conformance

| EMC Directive | pursuant to EC Directive 89/336/EEC <br> applied harmonized standards: <br> EN 50082.2 (Interference Immunity) <br> EN 55011, Class B (RFI-Emission) |
| :--- | :--- |
| (test conditions in accordance to "EMC Installation Scheme") | pursuant to EC Directive 73/23/EEC <br> applied harmonized standards: <br> EN 60204.1 / VDE113, EN 50178 / VDE160 |
| Low Voltage Directive |  |
