## Product Segments

## - Care Motion

TiMOTION's TA13 series linear actuator is designed primarily for dental chairs requiring high-push load solutions, but can also be applied to a wide range of other medical applications. The TA13 supports load ratings up to 10000 N . Its speed is up to $32.2 \mathrm{~mm} / \mathrm{s}$ even under the load of 1500 N . Certificates for the TA13 include IEC60601-1 and ES60601-1.

## Note

1 Please refer to the approved drawing for the final authentic value.
2 This self-locking force level is reached only when a short circuit is applied on the terminals of the motor. All the TiMOTION control boxes have this feature built-in.

3 The current \& speed in table are tested with 24 V DC motor. With a 12 V DC motor, the current is approximately twice the current measured in 24 V DC. With a 36V DC motor, the current is approximately two-thirds the current measured in 24 V DC. Speed will be similar for all the voltages
4. The current \& speed in table are tested when the actuator is extending under push load.

5 The current \& speed in table and diagram are tested with TiMOTION control boxes, and there will be around $10 \%$ tolerance depending on different models of the control box. (Under no load condition, the voltage is around 32 V DC. At rated load, the voltage output will be around 24 V DC)

6 Standard stroke: Min. $\geq 25 \mathrm{~mm}$, Max. please refer to below table
