## TA2

## series

## - Industrial Motion

TiMOTION's TA2 series linear actuator is compact, robust and capable of performing well in certain outdoor environments. This linear actuator is perfect for use in small spaces where force or capability cannot be sacrificed. Options include feedback sensors, signal sending limit switches and 90 degree clevis mounting.

## Note

1 Please refer to the approved drawing for the final authentic value.
2 This self-locking force level is reached only when a short circuit is applied on the terminals of the motor. All the TiMOTION control boxes have this feature built-in

3 The current \& speed in table are tested with 24 V DC motor. With a 12 V DC motor, the current is approximately twice the current measured in 24 V DC. With a 36 V DC motor, the current is approximately two-thirds the current measured in 24 V DC. With a 48 V DC motor, the current is approximately half the current measured in 24 V DC. Speed will be similar for all the voltages.

4 The current \& speed in table are tested when the actuator is extending under push load
5 The current \& speed in table and diagram are tested with a stable 24 V DC power supply.
6 With load, noise level $\leq 74 \mathrm{dBA}$ (by TiMOTION test standard, ambient noise level $\leq 36 \mathrm{dBA}$ )
